

Fat & Cellulite Treatment Machine - BeautyTek

Equipmed LTD, 12:00:00 AM:

Cellulite, Fat & Firming

The only machine to improve breast tissue and to treat clients with veinous conditions.

Most fat and cellulite treatment machines are mechanical in action. Some add a small amount of heat via RF current, Ultrasound, or Light; however the treatment remains essentially mechanical massage and the main effect is fluid loss and stimulation. Clients with veinous problems are contraindicated for mechanically based treatments - (30 to 50% of all clients)

- Only BeautyTek provides a totally new concept using micro-currents delivered according to each client's individual metabolic feedback. BeautyTek treats fat, cellulite, scars, acne, stretch marks and sagging breasts.
- Bio-cybernetic algorithms and artificial intelligence are applied by this ground-breaking system to both analyze and enhance the physiological conditions of the treated tissue.
- BeautyTek incorporates a camera and photographic module to display evidence of effectiveness from the very first treatment. Treatment regimes are half the number required by less effective mechanical systems.

'Only BeautyTek can Rejuvenate Breasts' BeautyTek opens up a whole new market.
